### Columbine Hybrids

What is more beautiful and useful for bouquets and florists, use than Delphiniums or Hardy Larkspurs. The blues and art shades are wonderful. Spikes of flowers are often 2 to 3 feet long. Many plants grow 5 to 6 feet tall.

No remedy for this is known except to cover the plants so they cannot sting them. Dusting plants with bone meal is said to keep them off. (This will make the plants grow better if it does not keep off the insects). Some say that coal dust sprinkled over the ground helps. Pull everyone that commences to turn yellow.

The Green Broccoli is gaining in popularity every season and is now considered a great delicacy in many high class hotels and restaurants. As easily grown as cabbage, maturing the first cutting in about 50 to 70 days. Cut while green before they commence to flower and prepare in the same manner as asparagus. This makes a very tasty and nourishing dish. The heads are similar to cauliflower and may be prepared in the same way if one desires. Cut out the center head when ready and small ones will form around on the branches.

The new Propageno is considered superior to the old sorts and matures early. Pkt. 10c; 1/2 oz. 20c; oz. 35c; 1/4 lb. \$1.20; lb. \$4.25.

## OUR QUALITY CANNOT BE EXCELLED

All seeds cannot be grown successfully in one locality. To produce a perfect crop a variety must be grown where it develops best. Nearly all the carrot, lettuce, onion and sweet pea seed used is grown in California. Most of the Muskmelon in Colorado, the Watermelon in the south. Many choice flower seeds have to be grown in Europe, etc. We have good growers where seeds can be grown to the greatest perfection.

## Vegetables of Special Merit

### Honey Rock Muskmelon

Also known as Sugar Rock or Honey Sweet. This is one of the handsomest and sweetest melons grown. In fact after eating this melon, you would not relish an ordinary melon because this has so much better flavor. It is one of the best shippers grown. The flesh is very deep and a rich salmon-orange. It is very prolific, often producing 5 to 7 melons on a vine. The rind is thin and so tough that it can ripen up on the vine and still ship well. Vines are strong, vigorous and healthy. Ripens about midsummer. Pkt. 8c; 2 pkts. 15c; oz. 18c;  $\frac{1}{4}$  lb. 45c; lb. \$1.45.

Carrot Red Cored Chantenay

De Lue's Golden Giant Corn

### New Tomato—Oxheart

Extra Large Fruits of Distinctive Shape.

This new Tomato is aptly named because the fruits are not only shaped like a beef heart, but also when well grown are very nearly as large. The color of the fruit is a deep pink or crimson of the same shade as the well known Ponderosa, and they have the same texture and mild flavor but produce even fewer seeds. As a home garden sort it is a splendid Tomato, but we do not recommend it as a market variety owing to its immense size and poor handling qualities. Pkt. 10c;  $\frac{1}{2}$  oz. 35c; oz. 65c;  $\frac{1}{4}$  lb. \$2.25.

Oxheart Tomato

### New Golden Gem Sweet Corn

This wonderful early Sweet Corn was introduced by the North Dakota Experiment Station and is about a week ahead of Early Sunshine. The ears are about the same size as Bantam, deliciously sweet and set very low on short stiff stalks. Golden Sunshine has become very popular in only a few years and we see no reason why Golden Gem will not be as eagerly sought when its extreme earliness and good quality become known. Pkt. 8c;  $\frac{1}{4}$  lb. 15c; lb. 45c; 3 lbs. for \$1.25.

### Spinach

#### Reselected Bloomsdale, Long-standing

In appearance quite similar to the Bloomsdale strain, of a little more compact growth, leaves a more intense green, in fact the deepest dark green we have ever seen. It stands heat remarkably well. When other kinds have bolted to seed, it does not show the least inclination to shoot and will stand up and remain in prime condition for several weeks. This variety seems destined to supersede many old sorts. Pkt. 5c; oz. 12c;  $\frac{1}{4}$  lb. 25c; lb. 70c.

### Mustard Spinach

A new vegetable which is gaining immense popularity. Matures a crop in about four weeks and can be sown at intervals throughout the season. It has the rich creamy spinach flavor to which is added the mild sprightly mustard taste making it one of the most palatable greens grown. Hot weather does not injure the crop. Try this and you will always grow it. Pkt. 5c; oz. 14c;  $\frac{1}{4}$  lb. 35c; lb. \$1.00.

### Witloof Chicory

Witloof Chicory is one of the finest of all winter salads and is considered a great delicacy in French restaurants, etc. Roots may be grown same as Parsnips or Carrots. Cover growing plants with old cloth or carpet to keep dark. Heads are ivory white and large as Cos Lettuce. Delicious either raw or with French dressing. A very large, sweet Pepper that will produce good crops in the northern parts of the country. Harris' Early Giant is not only very large, but the plants produce enormous yields and the Peppers mature earlier than any other very large kind with which we are acquainted.

The plants are of vigorous growth, often being 18 to 24 inches tall, and covered from top to bottom with enormous Peppers. These Peppers are so large that only forty-five, as picked from our field, filled a bushel crate. It takes only 21 to fill a 14-quart basket. The Peppers are 5 inches high and  $3\frac{1}{2}$  inches through; deep green turning to brilliant red. Flesh thick and of a very sweet, pleasant flavor. This will be found a very valuable Pepper for the home garden and a profitable one for market. Pkt. 10c;  $\frac{1}{2}$  oz. 30c; oz. 50c;  $\frac{1}{4}$  lb. \$1.75; lb. \$6.50 prepaid.

It is considered by many gardeners absolutely the earliest maturing Celery grown. It is large, vigorous, and appears to be immune to blight and rust. Highly recommended on account of its ease of culture—it requires no banking. Its attractive appearance when fully matured is most inviting; the foliage is creamy yellow, and the stalks creamy white, becoming almost white at the base. It is entirely devoid of any ribs or fiber, and it is brittle, tender, and deliciously flavored. Pkt. 10c;  $\frac{1}{2}$  oz. 30c; oz. 50c;  $\frac{1}{4}$  lb. \$1.75; lb. \$6.00.

### Onion—Mountain Danvers

The Best Keeping Onion of All

The earliest Yellow Globe variety. Ripens early and is very hard and solid, without any thick neck. Is of good size, of globe shape like the Danvers Yellow Globe, but slightly darker yellow color. The crop ripens evenly, without any scallops, and will keep with less shrinkage or loss from any cause than any other Onion. We recommend it for market and home garden. In many of the Onion growing sections of the Middle West and West, it is the leading sort. Pkt. 6c; oz. 20c;  $\frac{1}{4}$  lb. 50c; lb. \$1.75 prepaid.

Celery Golden Plume

Pepper Harris' Early Giant

### Longfellow Cucumber

The fruit averages 12 to 16 inches in length by about  $2\frac{1}{2}$  inches diameter, and is borne early and in real abundance despite its great length. One of the very few Cucumbers which, when grown outdoors, resembles the hothouse type; holding its dark green color until the last, and being in all other respects equally desirable. Pkt. 8c; oz. 20c;  $\frac{1}{4}$  lb. 50c; lb. \$1.45.

### Early Lake Champlain Muskmelon

Lake Champlain is a medium-sized Melon, nicely netted, flesh deep, sweet and melting, of golden yellow color. The plant is very vigorous and healthy, setting and ripening Melons even under adverse conditions which totally destroyed other varieties. It is a marvel of productiveness.

There have been other early Melons—and other varieties that are hardy and vigorous—but there is none besides Lake Champlain that combines those characteristics with the quality of the late maturing sorts. Pkt. 5c;  $\frac{1}{2}$  oz. 10c; oz. 15c;  $\frac{1}{4}$  lb. 45c; lb. \$1.00.

It is a heavy yielder, requiring about 110 days to mature a crop. It has already become extremely popular in many sections. Pkt. 10c;  $\frac{1}{2}$  oz. 15c; oz. 25c;  $\frac{1}{4}$  lb. 75c; lb. \$2.50.

## Sugar Boy

Sugar Boy Watermelon is the sweetest, most delicious and most prolific Watermelon on earth. There is no Melon that can begin to equal it in quality, richness of flavor, lusciousness, deep, juicy, rich core, fine outward appearance, large giant size and extreme earliness. Sugar Boy Melon will grow to weigh from 20 to 60 pounds, and every one of them, large or small, is sweet, tender, juicy, brittle, stringless and melting on the tongue. This Melon—being a cross of the Halbert's Honey, Monte Cristo and Kleckley Sweet—resembles very much the Kleckley in outward appearance. It retains all the good qualities of Kleckley Sweets, has a harder rind, making it a better shipper, grows larger and more uniform and has no hard white centers. Try this Melon. Pkt. 5c; oz. 15c; 1/4 lb. 40c; lb. \$1.15.
